EDUCATION

Jain College Of Engineering And Research

Bachelors of Technology in Computer Science and Engineering

Nov 2020 - May 2024

CGPA: 7.4/10

Sanjay Ghodawat PU College

Pre University (Class XII)

Apr 2018 - Mar 2020

Percentage: 62.8

Shri Vasantrao Jaywantrao Deshmukh High School

SSLC (Class X)

Apr 2005 - Mar 2018

Percentage: 73.6

EXPERIENCE

Varcons Technologies | Full Stack Developer Intern

Aug 2023 - Oct 2023

- During my internship, I gained valuable experience using tools like HTML, CSS, JavaScript, Node.js, React.js, Django, and MySQL for data analysis and visualization.
- Developed a RESTful API that accepts user data and returns relevant job recommendations in JSON format, enhancing user experience.
- I Designed a flexible recommendation algorithm to score job postings based on user criteria, ensuring effective matching and user satisfaction.

PROJECTS

Task Management API | Python, JWT, RESTful API, PostgreSQL, Django Rest Framework (DRF)

- **Task Management API** built with Django, allowing users to perform CRUD operations on tasks, including setting a task's title, description, status, priority, and due date. secured with JWT authentication.
- The API supports **filtering, sorting, pagination, and search functionality** to make task management more efficient. Tasks can be filtered by status and priority, and sorted by due date, priority, or creation date. It also enforces due-date validation and logical status transitions for tasks.
- **Technologies used:** Django, Django Rest Framework (DRF), JWT for authentication, SQLite or PostgreSQL, and DRF features for filtering, ordering, and pagination.

Online Voting System | Machine Learning, Django Framework, postgresSQL ,psycopg2,Pillow

- Utilized machine learning algorithms for fraud detection and prevention.
- Designed robust security measures to ensure confidentiality and integrity.
- Achieved scalable and user-friendly voting experience, enhancing democratic processes by Implementing a secure and efficient online voting platform.

E-commerce Website | React.js, Html, /Tailwind CSS , Authentication API

- Developed a responsive e-commerce platform using React.js.
- Implemented a robust product listing, shopping cart, and user authentication system.

Weather Prediction app | Django, Django-channels, Web socket, Weather API

- You can create a Django project which can predict weather details like cloud cover, wind and temperature dynamically.
- The application can include features to view weather insights for a particular location and also the live location. You may not have a proper dataset for weather predictions, you can make use of APIs available on the internet for the same.

CERTIFICATIONS

- **HackerRank** (Python)
- **Google** (Introduction to Generative AI)
- **AWS Cloud Practitioner Essentials** (AWS)

TECHNICAL SKILLS

- **Languages:** Python, Java, JavaScript, HTML, CSS, React.js
- **Backend:** RESTful API, MongoDB, mySQL postgresSQL , Node.js
- **Developer Tools:** Git, VS Code, Prompt Engineering, Postman, Docker, Android Studio, JWT, Tableau, Power Bi
- **Libraries:** Next.js, Django, Pandas, NumPy, Matplotlib, Salesforce(Administration, Developer)
